                                                                                                                                                                                                                                                NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 53 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
                                                                                                                                                                                                                     as soon as it
be preserved

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This rat cDNA sequence codes for the full-length form of the novel cumour suppressor protein SSeCKs (see AAW31347). The SSeCKs gene CC product is a substrate of protein kinase C and acts as a negative cregulator of mitosis and as an inhibitor of the transformed completer of protein kinase C and acts as a negative cregulator of mitosis and as an inhibitor of the transformed completer of cDNAs whose abundance was low in NH 3T3 cells and concernated following the expression of the activated oncogene verc. A 5'RACE product was spliced to this truncated sequence to construct the full-length SSeCKS cDNA sequence. This full-length SSeCKS cDNA sequence. This full-length SSeCKS concernated as well as homologous and hybridising nucleic acids are claimed, as are vectors comprising such nucleic acids, concernated phenotype in a host cell by introducing the nucleic acid. Introduction of a SSeCKS nucleic acid or gene concernate a host cell inhibits mitosis of the host cell, and the concernate concernate with disorders of concernation and/or with the expression of a malignant phenotype. CC special structure and cellular architecture (such as CL) captal structure and cellular architecture (such as CC Alzheimer's disease), and may be a marker for aberrancies in concernation of the sequence of concernations of the concernation of concernations in the concernation of concernation and concernation of concernation as the concernation of concernation as the concernation of concernation of concernation as the concernation of concernation as the concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of concernation of co

```

This rat cDNA sequence codes for an active truncated form of the novel tumour suppressor protein SSeCKs (see AAW31346). The SSeCKs gene product is a substrate of protein kinase C and acts as a negative regulator of mitosis and as an inhibitor of the transformed phenotype. The SSeCKS clone was identified by searching for cDNAs whose abundance was low in NIH 3T3 cells and decreased following the expression of the activated oncogene v-src. A SYACE product was spliced to the activated oncogene v-src. A SYACE product was spliced to the truncated sequence to construct a full-length SSeCKS cDNA (see AAV02302). This full-length SSeCKS nucleic acids, are claimed, as are vectors comprising such nucleic acids, host cells and methods of inhibiting the expression of a transformed phenotype in a host cell by introducing such nucleic acids. Introduction of a SSeCKS nucleic acid or gene product into a host cell inhibits mitosis of the host cell, allowing the treatment of diseases associated with disorders of proliferation and/or with the aspeciated with disorders of cytoskeletal structure and cellular architecture (such as Alzheimer's disease), and may be a marker cridenticy and cellular architecture (such as Alzheimer's disease), and may be a marker. \$

The present invention provides the protein and coding sequences of 444 novel human proteins. These were isolated from expressed sequences tags (ESTS). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate the immune system e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. Parkinson's disease. The present sequence is a coding sequence of the

```
The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatotropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug expression and dug metabolism.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
